AI-First Workflow Orchestration

Synctropic

We help you build an instance of your process

March 2026

The Problem: The Unscalable Expert

The Bottleneck

Knowledge workers, consultants, analysts, architects trade time for money. Their expertise is highly valuable but fundamentally unscalable.

Market Context

$7.6B → $52B

AI agents market by 2030

The Fragmentation

Current automation tools are rigid. They handle simple "if-this-then-that" tasks but fail at complex, multi-step reasoning requiring distinct personas.

Adoption Gap

88%

of orgs use AI, but workflows remain fragmented

The Lost Opportunity

Clients pay for the result of a process, not the hours. Experts leave money on the table because they cannot clone themselves.

Productivity Impact

40-90%

reduction in working hours possible

The Insight: Every high-value professional has a proprietary process trapped in their head. The market needs a platform to extract, automate, and monetize it.

Our Solution

Synctropic: Multi-Agent Workflow Builder

The Platform

A multi-agent workflow builder that turns complex human processes into repeatable, autonomous software engines.

How It Works

1. **Define Agents:** The system creates specialized AI agents, each with a distinct role and expertise.
2. **Configure Handoffs:** Set up intelligent handoffs between agents for seamless workflow orchestration.
3. **Generate Output:** The system produces the ultimate deliverable—reports, analysis, recommendations.

Example: Airbnb Consultant Workflow

A1 Market Research Agent
Scrapes local property comps, pricing data, and market trends from multiple sources

A2 Legal Analysis Agent
Analyzes local zoning laws, rental regulations, and legal landscape for compliance

A3 Occupancy Projection Agent
Cross-references regional events, seasonality, and tourism data for occupancy forecasts

A4 Report Generation Agent
Synthesizes all inputs into a client-ready profitability report with ROI projections

Proof of Concept: The Autonomous Software Factory

The Alpha Instance

To prove the platform, we built our own instance: an **Autonomous Software Factory** that takes a product from roadmap to deployed code using seven distinct agents.

Seven-Agent Architecture

Strategist
Roadmap & Sequencing

Architect
Blueprint & Spec

Builder Cluster
Code & Tests

DevOps
Deploy & Manifest

Security
Audit & Scan

Sentry
E2E QA & Healing

Overwatch
Continuous Monitoring & Anomaly Detection

Technical Moat

Artifact-Driven Communication

All agents communicate exclusively through a Shared Filesystem. Every handoff is a file write; every pickup is a file read.

Event-Driven Activation

Agents are activated by file events, not direct API calls. This ensures deterministic, reproducible, and auditable pipelines.

Scalable Pipeline Modes

Three modes—Solo, Team, Factory—scale with task complexity. The system adapts from prototypes to production systems.

Why This Matters

We've built the **hardest version** of this problem. If we can autonomously build software, we can automate any expert workflow.

The Synctropic Marketplace: An Economy of Expertise

The Flywheel

Build

Professionals use Synctropic to build their proprietary workflow engine, encoding years of expertise into autonomous agents.

↓

Deploy

They use it internally to **10x their own client output**, delivering more value in less time.

↓

Monetize

They package their workflow and sell it on the Synctropic Marketplace, creating passive income from their expertise.

The Outcome

A novice real estate investor can now pay a subscription to run the **"Top-Tier Airbnb Consultant"** workflow instance on demand—accessing expertise that would otherwise cost thousands per consultation.

Market Opportunity

No-Code Workflow Market

$7.25B → $16.52B

by 2030 (17.9% CAGR)

AI Orchestration Market

$9.76B → $58.92B

by 2033 (22.4% CAGR)

Enterprise Adoption

76%

planning agentic AI implementation within 12 months

Target Professionals

Consultants · Analysts · Architects

Revenue Strategy

Business Model & Go-To-Market

SaaS Subscription

Tiered monthly access for professionals to build and host their agent workflows.

Target

$99/mo

Based on agent count & complexity

Compute Fees

Usage-based pricing for running complex, multi-agent instances past a specific point.

Model

Pay-per-execution

Scales with client workload

Marketplace Take Rate

Percentage fee on every workflow instance sold or leased to third-party users.

Revenue Share

10%

of transaction value

Go-To-Market Strategy

1 Phase 1: High-Leverage Consultants

Target independent consultants with high-value, repeatable processes:

- Real estate investment analysts
- Financial analysis consultants
- Legal research professionals

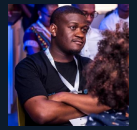
2 Phase 2: Scale to Enterprise

Expand to mid-market and enterprise teams:

- Consulting firms (McKinsey, BCG tier)
- Enterprise analyst teams
- Professional training organizations

Our Advantage

The Team: Why Us



Kuzivakwashe (Kuzi) Muvezwa
Founder & Principal Architect

15+ Years Full-Stack Engineering

15+ Years of Full-Stack Engineering: Veteran developer with a decade and a half of experience building software for the largest companies in Zimbabwe and international Fintech tools used by global banks to analyze Mortgage-Backed Securities.

- **Award-Winning AI & Automation Specialist:** * **Microsoft AI Hack for Social Good:** 2nd Place winner for developing "Sign-ificant," an AI-driven mobile app using Machine Learning for sign language interpretation.
- **Facebook Messenger Challenge:** Top 10 Finalist in Africa for "Sphinx," a high-scale conversational AI/chat game.
- **EthGlobal BuildQuest:** Winner of the Best Multiplayer Prize for building decentralized, utility-driven Web3 applications.
- **Mandela Washington Fellow:** Handpicked by the U.S. State Department for an intensive executive leadership program in Business and Entrepreneurship, recognizing a commitment to public service and innovation.
- **Ecosystem Builder:** Successfully formed and led the largest and most active developer community in Zimbabwe (Meta Developer Circle - Harare), scaling technical events and mentorship for thousands of developers.

Why We're Uniquely Positioned

- **Deep Workflow Knowledge:** I have spent years building tools that ingest, organise, and surface massive amounts of financial data (FHL, FNM, GNM), providing him with the unique insight needed to break down complex processes into "agents".
- **Proven Scalability:** Having worked with major Mobile Network Operators (MNOs) as a Project Lead and Startup Coordinator, I understand how to build products that scale for the African market and beyond.
- **Ecosystem Alignment:** As a long-term leader in the Meta Developer Circles, I am deeply familiar with the accelerator model and have already proven my ability to leverage global tech resources to solve local problems.
