AI-First Workflow Orchestration

# Synctropic

We help you build an instance of your process

March 2026

# The Problem: The Unscalable Expert

## The Bottleneck

Knowledge workers, consultants, analysts, architects trade time for money. Their expertise is highly valuable but fundamentally unscalable.

Market Context

**$7.6B → $52B**

AI agents market by 2030

## The Fragmentation

Current automation tools are rigid. They handle simple "if-this-then-that" tasks but fail at complex, multi-step reasoning requiring distinct personas.

Adoption Gap

**88%**

of orgs use AI, but workflows remain fragmented

## The Lost Opportunity

Clients pay for the result of a process, not the hours. Experts leave money on the table because they cannot clone themselves.

Productivity Impact

**40-90%**

reduction in working hours possible

**The Insight:** Every high-value professional has a proprietary process trapped in their head. The market needs a platform to extract, automate, and monetize it.

Our Solution

# Synctropic: Multi-Agent Workflow Builder

## The Platform

A multi-agent workflow builder that turns complex human processes into repeatable, autonomous software engines.

## How It Works

1. **Define Agents:** The system creates specialized AI agents, each with a distinct role and expertise.
2. **Configure Handoffs:** Set up intelligent handoffs between agents for seamless workflow orchestration.
3. **Generate Output:** The system produces the ultimate deliverable—reports, analysis, recommendations.

## Example: Airbnb Consultant Workflow

**A1 Market Research Agent**
Scrapes local property comps, pricing data, and market trends from multiple sources

**A2 Legal Analysis Agent**
Analyzes local zoning laws, rental regulations, and legal landscape for compliance

**A3 Occupancy Projection Agent**
Cross-references regional events, seasonality, and tourism data for occupancy forecasts

**A4 Report Generation Agent**
Synthesizes all inputs into a client-ready profitability report with ROI projections

# Proof of Concept: The Autonomous Software Factory

## The Alpha Instance

To prove the platform, we built our own instance: an **Autonomous Software Factory** that takes a product from roadmap to deployed code using seven distinct agents.

## Seven-Agent Architecture

**Strategist**
Roadmap & Sequencing

**Architect**
Blueprint & Spec

**Builder Cluster**
Code & Tests

**DevOps**
Deploy & Manifest

**Security**
Audit & Scan

**Sentry**
E2E QA & Healing

**Overwatch**
Continuous Monitoring & Anomaly Detection

## Technical Moat

### Artifact-Driven Communication

All agents communicate exclusively through a Shared Filesystem. Every handoff is a file write; every pickup is a file read.

### Event-Driven Activation

Agents are activated by file events, not direct API calls. This ensures deterministic, reproducible, and auditable pipelines.

### Scalable Pipeline Modes

Three modes—Solo, Team, Factory—scale with task complexity. The system adapts from prototypes to production systems.

## Why This Matters

We've built the **hardest version** of this problem. If we can autonomously build software, we can automate any expert workflow.

# The Synctropic Marketplace: An Economy of Expertise

## The Flywheel

### Build

Professionals use Synctropic to build their proprietary workflow engine, encoding years of expertise into autonomous agents.

↓

### Deploy

They use it internally to **10x their own client output**, delivering more value in less time.

↓

### Monetize

They package their workflow and sell it on the Synctropic Marketplace, creating passive income from their expertise.

## The Outcome

A novice real estate investor can now pay a subscription to run the **"Top-Tier Airbnb Consultant"** workflow instance on demand—accessing expertise that would otherwise cost thousands per consultation.

## Market Opportunity

No-Code Workflow Market

**$7.25B → $16.52B**

by 2030 (17.9% CAGR)

AI Orchestration Market

**$9.76B → $58.92B**

by 2033 (22.4% CAGR)

Enterprise Adoption

**76%**

planning agentic AI implementation within 12 months

Target Professionals

**Consultants · Analysts · Architects**

Revenue Strategy

# Business Model & Go-To-Market

## SaaS Subscription

Tiered monthly access for professionals to build and host their agent workflows.

Target

**$99/mo**

Based on agent count & complexity

## Compute Fees

Usage-based pricing for running complex, multi-agent instances past a specific point.

Model

**Pay-per-execution**

Scales with client workload

## Marketplace Take Rate

Percentage fee on every workflow instance sold or leased to third-party users.

Revenue Share

**10%**

of transaction value

## Go-To-Market Strategy

### 1 Phase 1: High-Leverage Consultants

Target independent consultants with high-value, repeatable processes:

- Real estate investment analysts
- Financial analysis consultants
- Legal research professionals

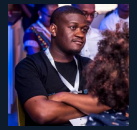
### 2 Phase 2: Scale to Enterprise

Expand to mid-market and enterprise teams:

- Consulting firms (McKinsey, BCG tier)
- Enterprise analyst teams
- Professional training organizations

Our Advantage

# The Team: Why Us



## Kuzivakwashe (Kuzi) Muvezwa

## Founder & Principal Architec t

15+ Years Full-Stack Engineering

**15+ Years of Full-Stack Engineering:** Veteran developer with a decade and a half of experience building software for the largest companies in Zimbabwe and international Fintech tools used by global banks to analyze Mortgage-Backed Securities.

**Award-Winning AI & Automation Specialist:** * **Microsoft AI Hack for Social Good:** 2nd Place winner for developing "Sign-ificant," an AI-driven mobile app using Machine Learning for sign language interpretation.

**Facebook Messenger Challenge:** Top 10 Finalist in Africa for "Sphinx," a high-scale conversational AI/chat game.

**EthGlobal BuildQuest:** Winner of the Best Multiplayer Prize for building decentralized, utility-driven Web3 applications.

**Mandela Washington Fellow:** Handpicked by the U.S. State Department for an intensive executive leadership program in Business and Entrepreneurship, recognizing a commitment to public service and innovation.

**Ecosystem Builder:** Successfully formed and led the largest and most active developer community in Zimbabwe (Meta Developer Circle - Harare), scaling technical events and mentorship for thousands of developers.

## Why We're Uniquely Positioned

- **Deep Workflow Knowledge:** I have spent years building tools that ingest, organise, and surface massive amounts of financial data (FHL, FNM, GNM), providing him with the unique insight needed to break down complex processes into "agents".
- **Proven Scalability:** Having worked with major Mobile Network Operators (MNOs) as a Project Lead and Startup Coordinator, I understand how to build products that scale for the African market and beyond.
- **Ecosystem Alignment:** As a long-term leader in the Meta Developer Circles, I am deeply familiar with the accelerator model and have already proven my ability to leverage global tech resources to solve local problems.
